DETAILED ACTION

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 19-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tuller et al. (4,042,550) and Lim (5,925,934) in view of Langari et al. (6,261,871). Regarding claims 19, 21, 22, and 25, Tuller et al. disclose a cured encapsulant (Abstract) resin composition as claimed, more specifically a styrene/maleic anhydride copolymer (col.2, lines 32-41) that can be used as an underfill composition, as taught by Lim (col.2, lines 28-36 and Figure 3). Tuller et al. do not appear to specifically disclose a method of fabricating a device as claimed. Langari et al. disclose a method of fabricating a semiconductor device by the steps as claimed, and using an underfill composition therein (Figure 6). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have used the underfill composition of Tuller et al. in the process as taught by Langari et al. because Tuller et al. teach that applying a styrene/maleic anhydride copolymer resin composition as an

Art Unit: 1712

encapsulant/underfill produces a composition with excellent moisture resistance and wet electrical properties, resulting in a higher quality product.

Regarding claim 20, Tuller et al. do not appear to specifically disclose providing the underfill composition simultaneously during reflow. However, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have provided the underfill composition simultaneously during reflow to save time, producing faster processing times and resulting in a more efficient process.

Regarding claims 23 and 24, Tuller et al. disclose curing at a time and temperature as included in the ranges as claimed (col.5, lines 24-30).

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
